

# Analysis of clinical and radiological manifestations of tuberculosis in military personnel

Pidverbetskyi O.Ya.

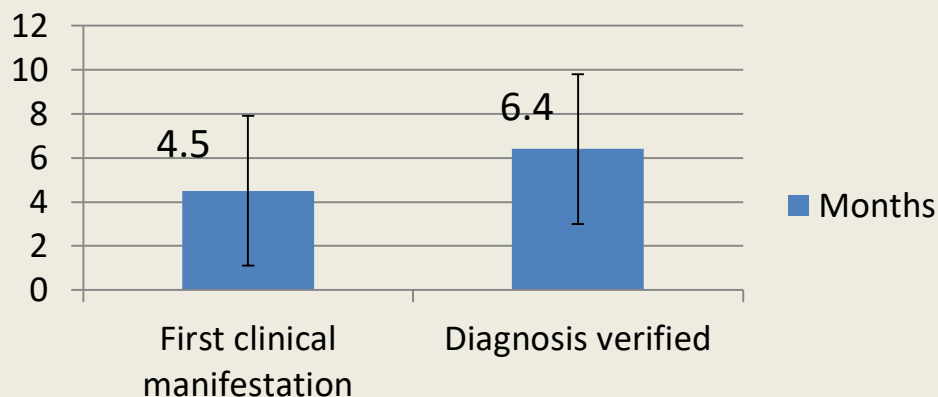

Department of Phthiisology and pulmonology of Bukovinian state medical university

**Purpose.** Conduct an analysis of clinical and radiological manifestations of tuberculosis in military personnel in Chernivtsi region.

**Materials and methods.** 13 patients with pulmonary TB, who are military personnel, were examined. Patient questionnaires and data analysis of disease case histories were conducted.

## Research results

The time of clinical manifestation of TB and diagnosis after the start of military service

Reasons for requesting medical assistance

Radiological manifestation of TB (%)

**Conclusions.** The average age of the patients is  $40.2 \pm 4.7$  years. The first clinical manifestations of the disease appeared shortly after the start of service ( $4.5 \pm 3.2$  months), however, the majority of TB cases (61.5%) were detected during examination for other reasons, such as combat injuries, indicating low awareness and insufficient attention to TB symptoms among military personnel themselves.
